## Valve Schedules Convert The Spec Into A System.

At some point in the design process of a commercial or industrial building's mechanical systems, specifying engineers switch from designing the systems required to laying out the actual build and designating the piping, joints and valves to be installed.

On Tuesday, Milwaukee Valve leaned on the expertise of Matt Martin of the James Martin Company to explain the Valve Schedule system. Over a period of about 40 minutes, Martin provided an excellent overview of Valve Schedules.

He broke down each system in a typical commercial building, looking at integrating various types of valves, their designs, their strengths and benefits, materials of construction and so on.

This presentation qualifies for Continuing Education Units (CEUs) from the American Society of Plumbing Engineers (**ASPE**), and the webinar is available on-demand. A link to the registration page can be found at the [Milwaukee Valve](#) Resources tab or by clicking the button to the right. Registration is still required for On-Demand attendance.
