Ingenious Lock Link Secures HP Levers.

Unlike Milwaukee Valve iron butterfly valves, the standard lever handle supplied with the High Performance (HP) butterfly does not provide a locking capability. But, thanks to the ingenuity of Milwaukee

Valve's engineers, a simple piece of punched steel provides tamper-resistant positive locking without a big expense or compromising the integrity of the handle or the latch plate.

A lock link can be field-installed to provide locking of the valve in any of the 10 positions of the latch plate. If required for a project, this option can be installed prior to shipment.

A new instruction bulletin for the HP lock link can be found [HERE](#). The instructions are pretty simple and straightforward. If you still have any questions, contact product support manager Lee Sorenson and he can walk you through it.
