

Valve Installation Bootcamp – Do's & Don'ts.

So many factors influence successful valve installations. It starts with the best understanding of the system and the related applications. From there, discriminating valve selection during the design phase can prevent field issues. And then proper techniques need to be followed in the actual installation, including resolving issues with both system and media conditions that can pop up during the build-out.

Join us for a complimentary webinar on Tuesday, June 22nd with Milwaukee Valve's application engineering manager, Lisa Hall. Hall will discuss recommendations based on successful installations of Milwaukee Valve ball, butterfly, gate, globe and check valves. She will cover how to avoid field issues with better valve selection during design phases, and she will conclude with tips on what to do or *not* do during installation.

The webinar will start at 1:00 (CDT) and run for 30-40 minutes, including a short Q&A session following the program.

A link to the webinar registration page can be found at the [Milwaukee Valve](#) website, or by clicking [HERE](#). Registration is required for Live or On-Demand attendance.
