

Stay A Step Ahead In Lead-Free Compliance.

In January of 2014, the Safe Drinking Water Act was passed through the US Senate. This legislation established new standards for potable water systems, specifically limiting the amount of lead permitted into potable piping systems. Since the Safe Drinking Water Act was passed, the law has undergone a variety of interpretations and adjustments, which can affect enforcement practices and system design.

Join us on Tuesday, August 30th at 1:00 CDT, when Gail Brill will present a 40-50 minute webinar on updates and changes to the lead-free legislation and enforcement. Gail wears many hats at Milwaukee Valve and is our designated representative related to the Safe Drinking Water Act. In her presentation, Gail will cover the following...

- She will recap changes that were made to the Safe Drinking Water Act since its adoption over 8 years ago.
- She will review Testing and Design Standards specifically for Lead-Free valves,
- She will discuss Materials of Construction that are typically used in manufacturing of valves and how they relate to the Act, and
- She will cover how to identify Lead-Free products that carry 3rd party certifications.

This webinar will serve as a good refresher for those who lived through the 2014 transition, help train those who are new to the industry, and hopefully offer guidance with any interpretation issues that may still exist today. Continuing Education Units (CEUs) are available from the American Society of Plumbing Engineers (**ASPE**). Registration is required for Live or On-Demand attendance.
