Milwaukee Valve Has The Triple Offset!

As we have been telling you over the past few months, Milwaukee Valve has launched the new TØV series valves. TØV takes precision performance to a higher level, with utilizing triple offset geometry to deliver bidirectional, zero-leak sealing — even under higher pressures and temperatures. This same design makes TØV triple offset valves firesafe, corrosion resistant and maintenance free, too.

Michael Goggins, Milwaukee Valve's operations coordinator, has inventory of TØV valves ready to ship to your location

Identifying the needs of each customer base and market is what makes our distribution partners so valuable. While we continue to work through a “what makes sense” mindset, rest assured that Milwaukee Valve inventories TØV valves and can ship from stock, even direct to job sites in some instances.

Triple Offset is a design feature in butterfly valves where the valve's stem, disc and sealing surface are all positioned at different off-center angles. Combining these three offsets produces a highly precise, bubble-tight seal with minimal operating friction — even at high pressures. TØV has passed the standards of API 598 for no-leak, bidirectional shutoff you can trust, as well as API 609 for use in more demanding fire-safe applications.

TØV valves are available in sizes ranging from **3-inch** thru **12-inch** in **Lug** and **Wafer** configurations. TØV comes in **carbon** or **stainless steel** for **ASME Class 150 & 300**.

For pricing and delivery information, contact your Milwaukee Valve customer service rep today. A complete listing, by territory, can be searched at our website, at

www.milwaukeevalve.com/find-sales-rep/.

To learn more about new Milwaukee Valve TØV valves, and download spec sheets or access 3D CAD drawings and BIM modelling, visit our **TØV** product page at www.MilwaukeeValve.com.
